

# 5 Design Sheets

## Sheet 1

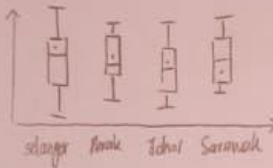

# LAYOUT

Malaysia is rich,  
but is the growth fair?

Not everyone's share looks  
the same

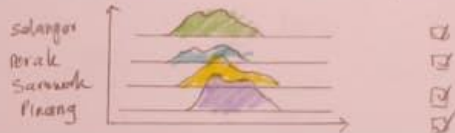

How wide are the gaps  
in each state?

Labour Force vs employment/unemployment

The end result? Poverty concentrated in certain places

Title: Malaysia's household income

Author: Leslie Lim

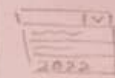

Date: 2/10/2025

Sheet: 3

Task: FIT379 Assignment 2

# OPERATION

Perhaps there could be  
a year filter or even  
a state filter for the  
poverty presentation so that  
it is easier for comparison  
or provides better  
context.

☒ ☒ ☐ ☐

# FOCUS

The focus and central idea of this layout & approach is to demonstrate that while Malaysia's economy grows, the benefits are not shared equally. The user will mostly engage with how income distribution links directly to labour force and poverty outcomes.

without the  
income growth,  
labour force against  
employment/unemployment  
and poverty chart,  
this visualization  
story would only  
show disjoint snapshots.

# DISCUSS

- A holistic view, since it explores beyond just income
- A few charts may be quite complex to make
- Possibly rich in story and dense in visuals.
